(54) IMAGE PROCESSING SYSTEM

(57)Abstract:

PURPOSE: To use same image data without changing its image quality even when an image area of the image data processed by plural image processing units differs.

CONSTITUTION: An external storage device 9 accessible by each of image processing units 1, 2 is connected to the system by a LAN, and when the image processing units 1, 2 generate image data, the image data are stored in the external storage device 9 to obtain relative position relation information formed by determining a real image area of the image data with respect to a normal size area. Correction image information with respect to areas at the outside of the real image area of the image data is designated and a file name of the image data stored in the external storage device 9, relative position relation information and correction image information stored are stored in the external storage device 9 as attribute information.
